

Block junk mail and viruses *before* they clog employee in-boxes or infiltrate your IT network.

Spam and virus threats are increasing exponentially every day and you can't afford to bog down your employees with unwanted emails or your expose your to viruses that can debilitate your IT systems. Our spam and virus protection service ensures that your network is protected with the latest virus protection software.

Email Spooling will place your email on a remote server to ensure that if your internal server goes offline, all your email will still be delivered when it is back online, with no missing email.

Virus remediation and system updates will eliminate down time due to company-wide virus infections.

Email Monitoring will watch over your email server like an angel and immediately alert you if your email server has any problems.

AltuShield Email Spam & Virus Filtering features:

- ✓ Stops spam, viruses, phishing, denial of service (DoS), directory harvest attacks (DHA), and other attacks
- ✓ Ensures no delays, message loss, or disruptions to email; with patented real-time, pass-through architecture
- ✓ Allows end users to manage their own spam in an efficient manner
- ✓ Create content-based policies for inbound and outbound traffic (including pre-defined lexicons for social security and credit card numbers)
- ✓ Guarantee email arrives even if your email servers go down with spooling
- ✓ Encrypt domain-to-domain messaging using standard SSL or TLS protocols
- ✓ Enable directory synchronization with your LDAP user data to ensure new users are automatically provisioned
- ✓ 99.99% availability for message processing & capacity to handle billions of transactions a day
- ✓ Implement quickly, with no hardware or software to install
- ✓ Performance is monitored 24/7 and services are SAS 70 audited
- ✓ Updates are released automatically at no additional cost and with no installation effort required
- ✓ Manage email retention with a centralized and searchable archive so everyone can locate email quickly.

Capture, store, and search your email archives:

- ✓ Capture and index all of your organization's email and attachments in a centralized repository
- ✓ Store email in redundant and secure Google data centers, creating a reliable, offsite backup
- ✓ Search your archive using parameters such as date range, sender, recipient, subject and content
- ✓ Place messages on hold to extend retention beyond assigned policies
- ✓ Export search results to PST or MBOX format
- ✓ Integrated spam and virus filtering included
